

Entrepreneurship and Product Design - ED223

Course Format: This is a 3-credit course (1-0-4-3). It is 1 hour lecture and 4 hours practical (lab) every week.

Course Content:

- 1) Entrepreneurship Fundamentals
- 2) Business Management Fundamentals
- 3) Product Design

To cover the essential elements of entrepreneurship in a manner that can sensitize students on the prospects, opportunities, and challenges in entrepreneurship and the potential for value creation from prospective ideas. In addition, there will be multiple modules of different functions of a company on Finance, HR, IT, & Marketing from industry experts. There will be an extended module focusing on 'Product Design' which will encompass aspects of design thinking and affordable innovation.

In addition to classroom teaching of essential concepts and theories, there would be a project-based learning approach. These would be practical exposure to the industry & incubation centres. Cases would be used to narrate actual journey of entrepreneurs and their enterprises (both successes and failures) having a mix of start-ups/corporates.

Reference Book(s):

- 1) Innovation and Entrepreneurship – Peter F. Drucker; Harper Perennial, 1986
- 2) Zero to One – Peter Thiel with Blake Masters; by Penguin Random House UK, 2014

Assessment Method:

- Individual assignment: 30% (combination of cases and quizzes)
- Team assignment: 20%
- End semester exam: 35%
- Attendance: 15%

Course Outcomes: Students will become aware of the importance of “*Entrepreneurial Capital*” being a vital contributor to the growth of a nation’s economy and well-being. Given that they are essentially going to be trained as “Engineers”, the course will enable them to appreciate as how to make/leverage technology and process driven innovations for solving problems and how to convert their ideas into marketable solutions.

In addition, right from the Vision, Purpose to creation and leading of larger established corporates would be discussed for students to be knowledgeable about the industry eco-system too.

The emphasis in this course is on project-based learning leading to identification of problems worthy of solving and proposing techno-economically viable ideas that could potentially solve them.

By the end of this course, students are likely to be inspired to explore entrepreneurship as a viable career goal.

Lecture Schedule:

MODULE	Description
