PC724	Multi-Modal Storytelling	Winter 2025-26
<i>Course Outline:</i> This module will introduce students to the crucial role of storytelling in communication practices. The module will explore how narratives are interwoven into various media, encompassing verbal and written language, gestures, music, visual art, interactive media, and time-based audio-visual format. In the contemporary digital landscape, narratives have evolved into new and complex forms and applications. A multimodal narrative is a form of storytelling that seamlessly integrates multiple modes of communication, such as text, images, audio, and video, to create a richer and more immersive experience as well as sensitizing the students to the requirements of different formats of storytelling. This approach harnesses the strengths of various media to enhance emotional and cognitive engagement, capturing the audience's attention and leaving a lasting impression. By integrating diverse formats, we can express ideas in a multitude of ways, catering to varied storytelling styles and making information both memorable and accessible. Contemporary digital media space offers enormous opportunities for many innovative narrative formats such as the "micro-narrative" or serialized storytelling where the user is allowed to engage with the content in bite-sized pieces. All this requires a deft and agile understanding of user needs and the craft of multi-modal story-telling. By the end of this module, students will cultivate a deep understanding of both the thematic and modal aspects of storytelling. In other words, they will explore the structure of narratives and the art of their telling across different media, within diverse social and cultural contexts.
